

CARBO 200

For Small Producers

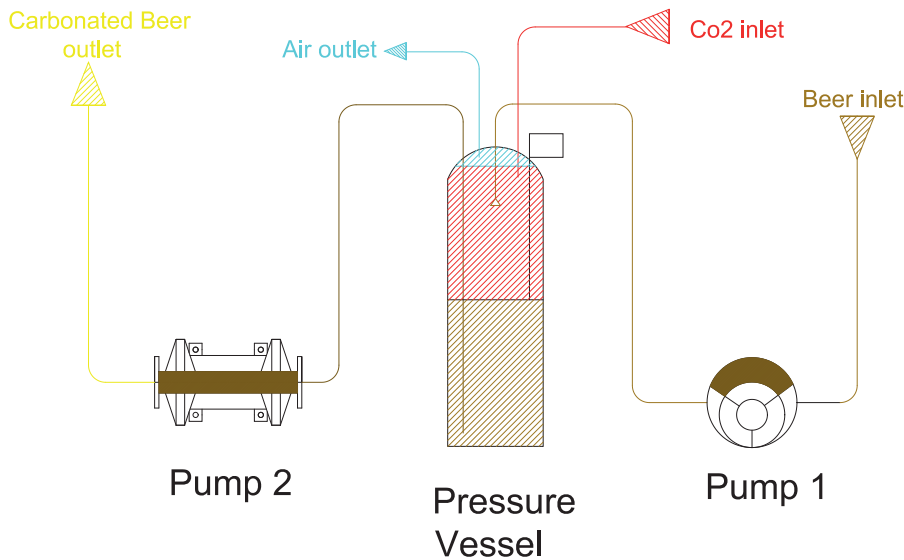

MACHINE DESCRIPTION

- Carbonator upto 200 litres per hour.
- Manufactured in stainless steel.
- Suitable for Beer, Cider, Soft Drinks, Wines etc.
- Ideal for carbonating beer for filling directly in kegs.
- Built in de-aeration.
- Fitted with pneumatic over pressure pump
- Wall mounted or integral machine.
- Customised to suit customers requirements i.e.
- Service: 240V 1ph, compressed air.
- Instruction manual included.

The machines are fully guaranteed for a period of 12 months after delivery. This guarantee applies to parts only and all labour costs and associated charges as per the day work schedule will be charged on an additional invoice.

Electronic, electric and parts having normal wear and tear are not covered within this warranty period. Items not of original manufacture or not installed by Carbonation Techniques Limited are not covered.

MACHINE FEATURES

Beer is taken in to carbonator through pressure pump 1, introduced in to Co2 rich atmosphere in the pressure vessel where beer is carbonated and oxygen is removed. Starting and stopping of beer flow is controlled by a level probe system in pressure vessel. Carbonated beer is removed from pressure vessel through pump 2 ready to go to filler or keg

ENVIROMENT FRIENDLY SPECIFICATIONS

- Lower filling pressures
- Lower power consumption – more cost effective
- Lower CO₂ pressures required result in
 - Less filling pressures required
 - Less CO₂ wastage at snift
 - Less bottle fobbing
- Fewer bottle explosions means
 - Less machine stoppages
 - Less product wastage
- Using CO₂ Efficiently = More Cost Effective & Greater Efficiency
